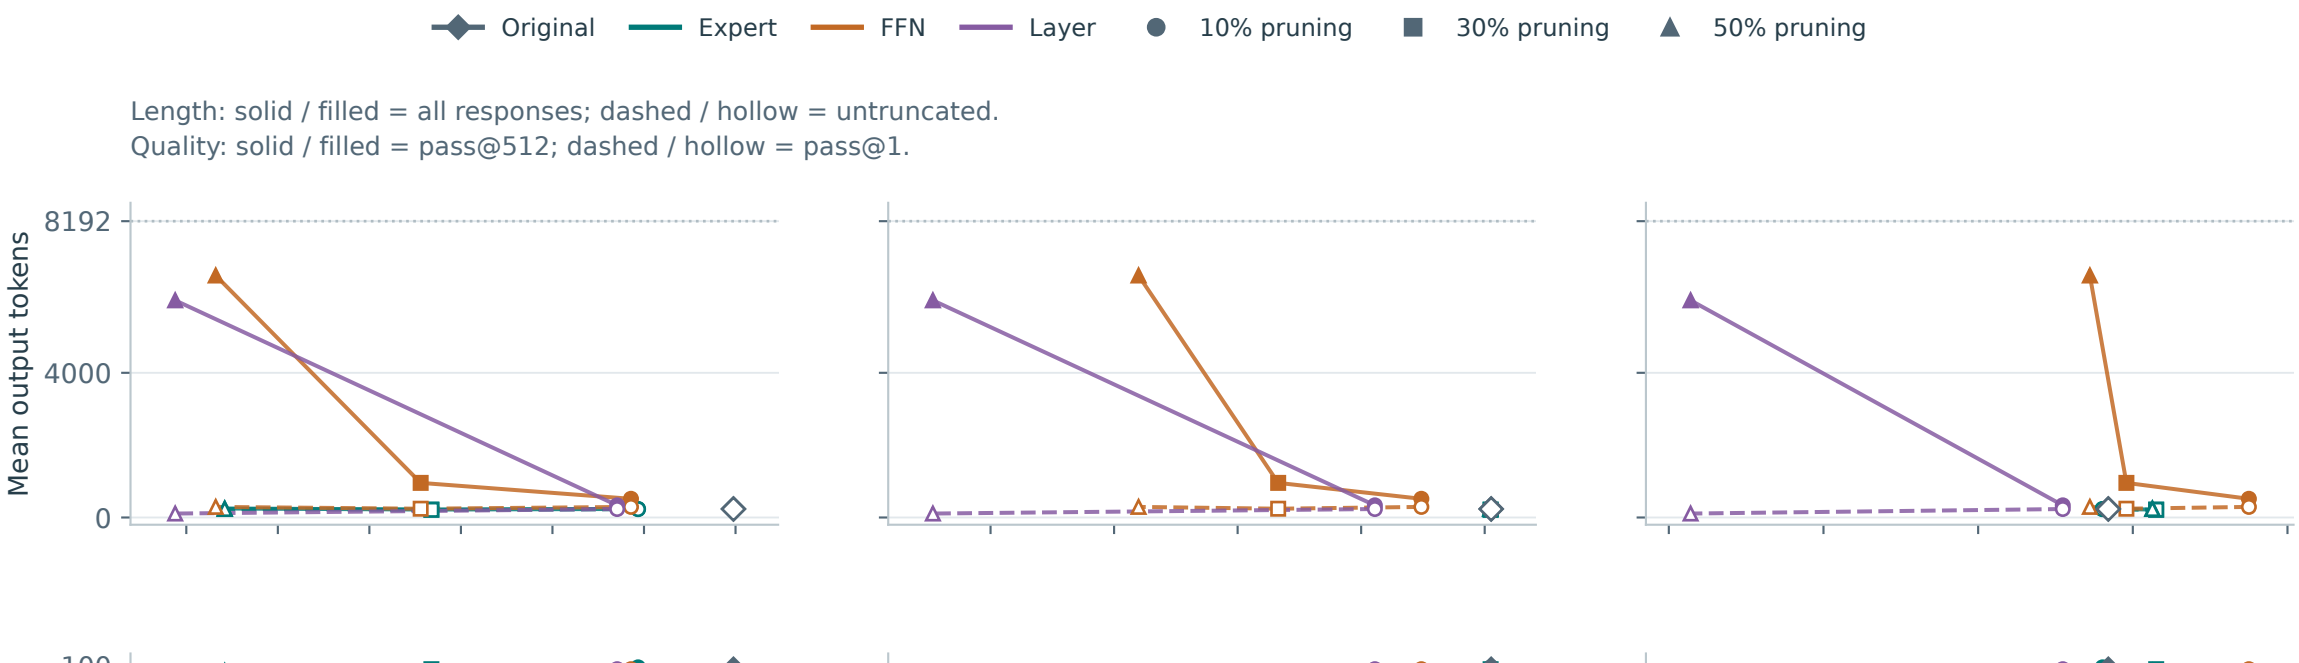
Figure 3 · Length, quality, and resources

GLM-4.7-Flash | HumanEval+



Quality: 8,192-token response limit; pass@512 on every task. Untruncated includes incorrect answers.
Resources: one H20, 512 input / 128 output tokens, one request at a time. Latency is a five-batch median.
Lines connect measured configurations in pruning-ratio order; no values are interpolated for missing configurations.
Layer 10% uses 5/47 removed layers (11% in the paper); Layer 30% has no corresponding quality result.
